Turkeys are unique because of their distinctive features such as the fleshy wattle that hangs from their necks and their large, fan-shaped tails. They also have an interesting behavior pattern and are known for their loud gobbles.

Why Does Turkey Make You Turkey?

This likely refers to the common myth that eating turkey makes people feel sleepy. Turkey contains tryptophan, an amino acid that helps produce serotonin, which can promote relaxation and drowsiness. However, it's the overall meal and amount of food consumed, not just the turkey itself, that often leads to a post-meal feeling of tiredness.
